
MADISON INTERMEDIATE GOVERNMENT BOND

March 31, 2022 | Separately Managed Account Investment Strategy Letter

Madison's philosophy revolves around the principle of "Participate and Protect®", which means we strive to build portfolios that participate as fully as possible in favorable markets and, more importantly, protect principal in difficult markets. We believe that this is best pursued through active duration, yield curve and sector management with the goal of minimizing portfolio risk. Our general objective for this portfolio is to pursue the highest risk-adjusted total investment return within the policy limitations of (1) investing in U.S. Treasuries and U.S. Agencies (2) maintaining a dollar weighted average maturity of ten years or less.

The Federal Reserve (Fed) has left little doubt as to the path of monetary policy for the foreseeable future. As expected, the Fed increased the Federal Funds Rate by 25 basis points (bps) in March and indicated a much more aggressive path for monetary policy than just a quarter ago. The prospect of rising rates, stubborn inflation measures, and the Ukraine conflict introduced increased volatility across markets.

MARKET VOLATILITY RETURNS ... FEW PLACES TO HIDE

Financial markets experienced one of the most volatile periods in years during the first quarter of 2022, even when compared to the dramatic moves as the Covid-19 shutdown unfolded. Spanning equity, commodity, and bond markets, investors found few places to hide. However, after experiencing this rapid repricing, there are reasons to be optimistic going forward. Much of the volatility experienced in recent months arose from a realization that Fed's massive financial stimulus is likely to end sooner than expected. With inflation remaining stubbornly elevated, the Fed raised its own projections for rate increases and balance sheet reduction. Investors, taken by surprise, reacted to this more aggressive approach to policy normalization by rapidly repositioning across financial markets. In the bond market, this repricing of expectations pushed yields higher, flattening the yield curve, and leading to one of the most difficult quarters in bond market history.

COULD THE BOND MARKET BE HELPING THE FED?

As difficult as the quarter was for bond investors, it's likely that higher yields could aid the Fed in combating its inflationary concerns. Restrictive monetary conditions should impact aggregate demand and assist in cooling price pressures while supply constraints ease naturally over time. During the March Fed meeting, updated projections were released indicating a more aggressive path for monetary policy. Median estimates for the Fed Funds Rate in December 2022 and 2023 rose to 1.875% and 2.75% up from 0.875% and 1.625% last quarter. Interestingly, the Fed's own long-term neutral rate remains unchanged at approximately 2.375%. The bond market expressed its view by discounting a faster path than the Fed's forecast, pricing in a 2.375% Fed Funds Rate at the end of 2022 and over 3% by 2023, well past the neutral rate. For their part, the Fed has publicly reiterated its desire to regain control of its Congressional mandate, full employment with stable prices, by employing a patient and data-driven monetary policy normalization. The bond market, ever skeptical, has rekindled its vigilante nature and done some advance legwork for the Fed.

VOLATILITY AND THE SILVER LINING

There's no other way to say it, the first quarter was a difficult one for all investors. Seldom have we seen such a rapid and powerful revaluation across nearly all market sectors. The first quarter of 2022 underscores the need for a consistent, disciplined, and risk-conscious approach to investing. The upward move in rates has restored market yield to fixed income investors after a prolonged period of lower-than-average Treasury yields. With these more reasonable valuations we view present market conditions as providing more opportunities than we've seen in several quarters. While we have begun to take advantage of improved valuations in recent weeks, we view the coming months as likely to present more opportunities as the path of policy becomes increasingly clear.

PERFORMANCE AND POSITIONING

During the first quarter, the Madison Intermediate Government Only portfolio outperformed the benchmark by 77 basis points, returning -3.42% (gross of fees) versus the Bloomberg Barclay's Intermediate Government Index return of -4.19%. Net of fees, the portfolio returned -3.54%, -3.73%, and -4.15% (fees of 0.50%, 1.25%, and 3.00%, respectively). Conservative duration positioning was significantly additive to performance as Treasury rates moved higher throughout the quarter. Sector allocation, security selection, and portfolio yield were neutral to performance during the period. The biggest detractor to performance was yield curve flattening as short rates reacted to accelerated expectations for Fed policy normalization increasing more rapidly than longer-term rates.

Our conservative approach to portfolio construction remains intact. Conservative duration positioning continues to contribute to positive relative performance as interest rates have adjusted higher. Higher yields have allowed the strategy to add meaningful yield by rolling short maturities out the yield curve as the curve has flattened. We will continue adding to positions further out the curve should yields continue their recent rise. We view the 3-5 year maturity sector as attractive given the increased yield and lower maturity risk versus longer issues. We continue to hold benchmark Agency issues in the portfolio although we have stepped back on new purchases as valuations remain near recent highs. We anticipate the renewed potential for curve steepening and will seek opportunities to move holdings out the curve should longer rates shift higher.

***Net returns are reduced by three separate annual model fees: the first is an annual non-bundled fee of 0.50% representing the highest fee within the product's standard fee schedule, applied quarterly for periods prior to January 1, 2022 and applied monthly for periods beginning January 1, 2022; the second and third are annual model bundled fees of 1.25% and 3.00%, applied quarterly for periods prior to January 1, 2022 and applied monthly for periods beginning January 1, 2022. Due to variances between wrap/UMLA programs, multiple net returns are presented to show two possible outcomes at different total annual bundled fee rates. The model bundled fees represent a fee charged to clients and combines Madison's management fee plus a maximum advisor fee. Actual fees will vary depending on each individual agreement, so clients should consult their advisor for actual fees. See each entity's Part 2A Disclosure Brochure for more information. Actual returns may vary depending on a particular account's inception date, trading platform and trading discretion. Any differences in the timing of trades may result in various performance outcomes for Madison's separately managed accounts versus model manager accounts.*

DISCLOSURES

1. This measure is not the result of an assessment of the credit quality of the composite's portfolio by a Nationally Recognized Statistical Rating Agency ("NRSRO") or any other independent entity.

2. Credit quality ratings on underlying securities of the composite are received from one or more NRSRO (e.g., S&P, Moody's, Fitch, etc.) and converted to the equivalent major rating category commonly utilized by more than one NRSRO. In the event of split rating between NRSROs, (i.e., when a majority rating cannot be derived), the lower rating is used. Bonds backed by U.S. Government or agency securities are given an implied rating equal to the rating of such securities. Ratings and portfolio credit quality may change over time. Portfolio distributions are rounded to the nearest 0.1%.

All or some of the above information is presented as "supplemental information" included as part of the GIPS® Report for the Intermediate Government Bond Composite on the reverse side, which must be included with this material. References to "Madison" are to that composite and references to inception date refer to performance since 1/1/1993. Year-to-date, quarterly and annualized performance figures are considered "preliminary" as of the date of this piece. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Indices are unmanaged. An investor cannot invest directly in an index. They are shown for illustrative purposes only, and do not represent the performance of any specific investment. Index returns do not include any expenses, fees or sales charges, which would lower performance.

All investing involves risks including the possible loss of principal. There can be no assurance the portfolios will achieve their investment objectives. The risks associated with an investment in the portfolio can increase during times of significant market volatility. The principal risks of investing in the portfolio include: interest rate risk, call risk, risk of default and liquidity risk. As interest rates rise, the prices of bonds fall. Long-term bonds are more exposed to interest-rate risk than short-term bonds. Unlike bonds, bond portfolios have ongoing fees and expenses. Please consult with your financial advisor to determine your risk tolerance and investment objectives.

It should not be assumed that recommendations made in the future will be profitable or will equal the performance of the securities in this list.

Holdings may vary depending on account inception date, objective, cash flows, market volatility, and other variables. Any securities identified and described herein do not represent all of the securities purchased or sold, and these securities may not be purchased for a new account. There is no guarantee that any securities transactions identified and described herein were, or will be profitable. Any securities identified and described herein are not a recommendation to buy or sell, and is not a solicitation for brokerage services.

Upon request, Madison may furnish to the client or institution a list of all security recommendations made within the past year.

Definitions

Standard Deviation: a statistical measurement of dispersion about an average, which, for a portfolio, depicts how widely the returns varied over a certain period of time. Investors may use the standard deviation of historical performance to understand the range of returns for a portfolio. When a portfolio has a higher standard deviation than its benchmark, it implies higher relative volatility. Standard deviation has been calculated using the trailing monthly total returns for the appropriate time period. The standard deviation values are annualized.

Downside Capture Ratio: a portfolio's performance in down markets relative to its benchmark. The security's downside capture return is divided by the benchmark's downside capture return over the time period.

Upside Capture Ratio: a portfolio's performance in up markets relative to its benchmark. The security's upside capture return is divided by the benchmark's upside capture return over the time period.

Effective Duration: a measure of a portfolio's interest-rate sensitivity. The longer a portfolio's duration, the more sensitive the portfolio is to shifts in interest rates.

Average Maturity: computed by weighting the maturity of each security in the portfolio by the market value of the security, then averaging these weighted figures.

Yield to Maturity measures the annual return an investor would receive if they held a particular bond until maturity as of the end of a report period. In order to make comparisons between instruments with different payment frequencies, a standard yield calculation basis is assumed. This yield is calculated assuming semiannual compounding.

Portfolio Turnover: a measure of the trading activity in an investment portfolio—how often securities are bought and sold by a portfolio. The range represents the typical turnover of the portfolio.

Yield to Worst the lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

"Madison" and/or "Madison Investments" is the unifying tradename of Madison Investment Holdings, Inc., Madison Asset Management, LLC ("MAM"), and Madison Investment Advisors, LLC ("MIA"), which also includes the Madison Scottsdale office. MAM and MIA are registered as investment advisers with the U.S. Securities and Exchange Commission. Madison Funds are distributed by MFD Distributor, LLC. MFD Distributor, LLC is registered with the U.S. Securities and Exchange Commission as a broker-dealer and is a member firm of the Financial Industry Regulatory Authority. The home office for each firm listed above is 550 Science Drive, Madison, WI 53711. Madison's toll-free number is 800-767-0300.

Any performance data shown represents past performance. Past performance is no guarantee of future results.

DISCLOSURES

Although the information in this report has been obtained from sources that the firm believes to be reliable, we do not guarantee its accuracy, and any such information may be incomplete or condensed. All opinions included in this report constitute the firm's judgment as of the date of this report and are subject to change without notice. This report is for informational purposes only and is not intended as an offer or solicitation with respect to the purchase or sale of any security.

This piece is not intended to provide investment advice directly to investors. Opinions stated are informational only and should not be taken as investment recommendation or advice of any kind whatsoever (whether impartial or otherwise).

Gross performance results do not reflect the deduction of investment advisory fees. Your returns will be reduced by advisory fees and other expenses that may be incurred in the management of your investment advisory account. Investment advisory fees are described in our disclosure brochure.

Our expectation is that investors will participate in market appreciation during bull markets and be protected during bear markets compared with investors in portfolios holding more speculative and volatile securities. There is no assurance that these expectations will be realized.

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services.

Blomberg Intermediate Government Index measures the performance of United States dollar-denominated United States Treasuries and government-related securities that have a remaining maturity of greater than or equal to one year and less than 10 years.

Assets above are rounded to the nearest million

As of December 31, 2021, total assets under advisement in this strategy are \$233 million encompassing bundled fee accounts, non-bundled fee accounts and non-discretionary accounts which include \$21 million in model-traded assets. This is presented as supplemental information.

Intermediate Government Bond Composite contains fully discretionary intermediate government only bundled and non-bundled fee accounts. The composite seeks to invest in investment grade government securities. Average maturities range from 0 to 12 years, with average duration of 0 to 9 years. The principal risks of investing in the portfolio include: interest rate risk, call risk, risk of default and liquidity risk. As interest rates rise, the prices of bonds fall. Long-term bonds are more exposed to interest-rate risk than short-term bonds. Unlike bonds, bond portfolios have ongoing fees and expenses. In a low-interest environment, there may be less opportunity for price appreciation. For comparison purposes the composite is measured against the Bloomberg U.S. Intermediate Government Bond Index (Index) which measures the performance of United States dollar-denominated United States Treasuries and government-related securities that have a remaining maturity of greater than or equal to one year and less than 10 years. Effective January 1, 2022, the composite was redefined to begin including both bundled and non-bundled fee accounts. Prior to January 1, 2022, the composite was named Intermediate Government Bond Sub-Advisory Composite.

For the purposes of GIPS compliance and the determination of total assets under management, the Firm is defined as Madison. Madison represents Madison Investment Advisors, LLC ("MIA") and Madison Asset Management, LLC ("MAM"), two investment advisers under common control registered with the U.S. Securities and Exchange Commission pursuant to the Investment Advisers Act of 1940. (Registration does not imply a certain level of skill or training.) Prior to December 1, 2010, the Firm's composites were maintained by Madison Investment Advisors, Inc. ("MIA Inc."). On November 30, 2010, pursuant to a corporate reorganization that involved no change of control or personnel relating to account composite management, all composite accounts managed by MIA Inc. were transferred to MIA and performance information for periods prior to December 1, 2010 refer to this composite as managed by MIA Inc. During the first quarter of 2013, MIA and its parent company, MAM (also a registered investment adviser), began the process of eliminating the distinction between accounts and products managed by the two companies. Because MIA and MAM share all resources and personnel at their mutual Wisconsin office location and because there is no longer a brand or line of business distinction between products and services offered by the two registered investment advisers, for periods after March 31, 2013, the collective definition of the firm (Madison) includes accounts and assets managed by MAM and MIA. However, the firm does not claim compliance with the GIPS standards for assets and accounts managed by MAM prior to April 1, 2013. As of December 31, 2013, Madison Scottsdale, LC ("Scottsdale"), another registered investment adviser under common control with MIA, merged its assets into, and became part of, MIA and subsequently those assets became part of the firm (Madison). The transaction resulted in no change to the resources or personnel as the sole purpose of this change was to simplify Madison's legal corporate structure. Prior to January 1, 2014, Scottsdale did not claim GIPS compliance and no performance for composites formally maintained by Scottsdale are contained in this performance presentation or included in the definition of the firm (Madison). *As of October 30, 2020, Hansberger Growth Investors, LP ("HGI LP"), an affiliated registered investment adviser under common control with MIA, consolidated its assets into MIA, and subsequently those assets became part of the firm (Madison). The transaction resulted in no change to the resources or personnel as the sole purpose of this change was to simplify the legal corporate structure. Prior to October 30, 2020, HGI LP claimed GIPS® compliance and all composite accounts managed by HGI LP were transferred to MIA and performance information for periods prior to October 30, 2020 refer to those composites as managed by HGI LP. On June 11, 2021, Madison acquired the fixed income management assets of Reinhart Partners, Inc. ("Reinhart"), an unaffiliated registered investment adviser, and subsequently those assets became part of the firm (Madison). The Investment Team of Reinhart, who were responsible for composite performance prior to June 11, 2021, joined Madison on that date and continue to manage the Reinhart Fixed Income Strategies. A list of composite descriptions and a list of broad distribution pooled funds are available upon request.

Madison claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. The firm, as defined above, has been independently verified for the periods January 1, 1991 through December 31, 2020. A copy of the verification report is available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

MADISON
INTERMEDIATE GOVERNMENT BOND COMPOSITE
GIPS COMPOSITE REPORT

Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Beginning January 1, 2010, composite policy requires the temporary removal of any portfolio incurring a client-initiated significant cash inflow or outflow of greater than 75% of portfolio assets. Past performance is not indicative of future results.

The U.S. Dollar is the currency used to express performance. Time-weighted returns are presented gross and net of fees and include the reinvestment of all income. For bundled fee accounts, pure gross returns are shown as supplemental information and are stated gross of all fees and have not been reduced by transaction costs. For non-bundled fee accounts, the gross returns are stated gross of all fees and have been reduced by transaction costs. Net returns are reduced by three separate annual model fees. The first net return is reduced by an annual non-bundled model fee which represents the standard fee: 0.50%, applied quarterly for periods prior to January 1, 2022 & applied monthly for periods beginning January 1, 2022. The next two net returns are reduced by annual bundled model fees of 1.25% and 3.00%, applied quarterly for periods prior to January 1, 2022 & applied monthly for periods beginning January 1, 2022. Due to variances between wrap/UMA programs, multiple net returns are presented to show two possible outcomes at different total annual bundled fee rates. Bundled fees include Madison's portfolio management fee, as well as all charges for trading costs, custody, other administrative fees and any third-party manager fees. Bundled-fee accounts make up 100% of the composite for all periods shown prior to January 1, 2022. Actual returns may vary depending on a particular account's trading platform and trading discretion. Any differences in the timing of trades may result in various performance outcomes for Madison's separately managed accounts versus model manager accounts. Actual returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. The collection of fees produces a compounding effect on the total rate of return net of management fees. As an example, the effect of investment management fees on the total value of a client's portfolio assuming (a) quarterly fee assessment, (b) \$1,000,000 investment, (c) portfolio return of 8% a year, and (d) 1.00% annual investment advisory fee would be \$10,416 in the first year, and cumulative effects of \$59,816 over five years and \$143,430 over ten years. The annual composite dispersion presented is an equal-weighted standard deviation calculated using the annual pure gross returns of the accounts in the composite for the entire year. The three-year annualized ex-post standard deviation of both the composite (using monthly pure gross returns) and the benchmark are presented for year-end periods beginning in 2011. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

The management fee schedule is as follows: 0.50% annually on the first \$5 million and 0.40% annually on the balance. Total annual bundled fees charged by wrap/UMA sponsors familiar to Madison are generally in the range of 1.00% to 3.00% annually. Bundled fee schedules are provided by independent wrap/UMA program sponsors and are available upon request from the respective wrap/UMA sponsor. Actual investment advisory fees incurred by clients may vary. Additional information regarding investment advisory fees are described in our disclosure brochure.

The Intermediate Government Bond Composite was created January 1, 2002 and the inception date is January 1, 1993.
